

I.S. Radio communication for hazardous area

The approvals for our intrinsically safe radios now cover all ATEX gas groups, IIC, IIB and IIA. ATEX IIC radios will now conform to the ATEX gas groups IIC and IIB of the European Union's ATEX Directive 94/9/EC, the two most stringent gas group classifications for the most hazardous gases and vapours. In addition, it also conforms to the international IEC approval, which is a requirement for most countries outside the EU .

ATEX IIA radios will now conform to ATEX gas group IIA only, offering the maximum permitted RF output in any given application within mainland Europe. VHF variants offer up to 5 watts output and the UHF variant up to 4 watts.
